

SOUTH AFRICAN PROPERTY TOOLKIT

The SA Property Investor AI Pack

36 practical ChatGPT and Claude prompts for South African rental investors

Analyse deals faster. Tighten tenant ops. Handle maintenance mess without guessing.

Launch price: R249

Regular price: R399

Deal screening • Tenant ops • Maintenance • Portfolio decisions

This pack is for South African property investors who are tired of messy decisions.

It gives you 36 practical prompts you can paste into ChatGPT or Claude to move faster on deal screening, bond and cash-flow thinking, tenant communication, maintenance planning, rental operations, and exit decisions.

This is not legal or financial advice. It is an operator pack built to help you think clearly, draft faster, and avoid sloppy admin.

How to use it well

- Add the property type, suburb, and city.
- Use real rent, price, and cost inputs.
- State your target return and constraints.
- Replace bracketed placeholders like [PURCHASE_PRICE].

What's inside

1. Deal Screening

2. Finance and Cash Flow

3. Due Diligence and Acquisition

4. Tenant Operations

5. Maintenance and Property Management

6. Portfolio and Exit Decisions

Use these like an operator, not a dreamer. The point is not to sound clever. The point is to avoid weak deals, weak admin, and expensive hesitation.

SECTION 1

Deal Screening

1. Quick deal screen

Act as a disciplined South African property investment analyst. I am looking at a [PROPERTY_TYPE] in [SUBURB, CITY] for [PURCHASE_PRICE]. Expected gross monthly rent is [RENT]. Monthly rates, levy, insurance, and other fixed costs are [MONTHLY_COSTS]. I want a fast first-pass verdict. Calculate gross yield, rough net cash flow before tax, biggest deal risks, and whether this deserves deeper due diligence. End with one of three verdicts: kill, watch, or pursue.

2. Compare two deals

Compare these two South African property deals as if you were choosing one for a cash-flow-focused investor. Deal A: [DETAILS]. Deal B: [DETAILS]. Evaluate gross yield, likely net yield, financing risk, tenant-demand risk, maintenance exposure, and resale upside. Recommend the stronger deal and explain why in plain English.

3. Area sanity check

I am considering buying in [SUBURB, CITY]. Give me a property investor sanity-check framework for this area. Focus on tenant demand, likely vacancy risk, affordability of the target tenant, transport access, crime concerns, school/employment anchors, oversupply risk, and what I should verify before buying.

4. Offer price backsolve

I need to backsolve the maximum purchase price for a South African rental property. Desired gross monthly rent is [RENT]. My target gross yield is [TARGET_YIELD]% and my buffer for repairs and vacancy is [BUFFER]%. Calculate the maximum purchase price I should pay, then show the numbers for 3 slightly lower offer levels so I can negotiate properly.

5. Flip vs hold decision

Evaluate whether this South African property should be treated as a flip, a long-term rental, or a pass. Property details: [DETAILS]. Renovation estimate: [RENOVATION_COST]. Likely resale value after upgrade: [ARV]. Likely rent after upgrade: [RENT]. Compare the economics and risk of both strategies and recommend one.

6. Red-flag checklist before viewing

Build me a pre-viewing red-flag checklist for a South African investment property. I want the list grouped into title/legal, structure, security, utilities, tenantability, sectional-title risks if relevant, and neighbourhood warning signs.

SECTION 2

Finance and Cash Flow

7. Bond repayment stress test

Using South African property finance assumptions, stress-test this rental deal. Purchase price: [PURCHASE_PRICE]. Deposit: [DEPOSIT]. Interest rate: [RATE]. Loan term: [TERM]. Rent: [RENT]. Monthly non-bond costs: [COSTS]. Show base case, interest-rate-up case, 1-month vacancy case, and repair-shock case. Tell me how fragile the deal is.

8. Full monthly cash-flow draft

Build a clean monthly rental cash-flow model for this South African property using these inputs: [INPUTS]. Include rent, vacancy allowance, levies, rates, insurance, maintenance reserve, agent fee if any, bond payment, and net cash flow. Also identify which assumptions matter most.

9. Deposit decision

Should I put down a larger deposit on this South African buy-to-let or keep more cash for reserves and the next deal? Property details: [DETAILS]. Available cash: [CASH]. Compare three scenarios: low deposit, medium deposit, and aggressive deposit. Focus on cash flow, risk, and optionality.

10. Emergency reserve target

Based on this property portfolio: [DETAILS], calculate a sensible emergency reserve target for a South African rental investor. Explain the minimum, better, and comfortable reserve levels and what each one protects me against.

11. Rent increase timing

Help me decide whether to increase rent on this property now. Current rent: [RENT]. Market estimate: [MARKET_RENT]. Lease renewal date: [DATE]. Tenant quality: [TENANT_CONTEXT]. Weigh the gain from an increase against vacancy and relationship risk, then suggest a practical number and message angle.

12. Buy in personal name vs company

Give me a practical decision framework for whether to hold this South African rental property in my personal name or inside a company. Do not pretend there is one universal answer. Compare admin burden, tax considerations to verify with a professional, financing implications, estate-planning logic, and scaling consequences.

SECTION 3

Due Diligence and Acquisition

13. Document request list

Draft a due-diligence document request list for a South African property purchase. I want it grouped into seller documents, municipal/levy items, lease/tenant items, plans/compliance items, and finance-related documents. Keep it practical and investor-focused.

14. Questions for the estate agent

Write a sharp list of questions I should send an estate agent about this investment property in South Africa. Property details: [DETAILS]. I want questions that surface motivation, hidden defects, vacancy history, utility problems, body corporate issues, tenant quality, and pricing flexibility.

15. Sectional-title risk check

I am looking at a sectional-title investment property in South Africa. Create a due-diligence checklist focused on body corporate finances, special levies, conduct rules, maintenance backlogs, reserve fund risk, security issues, and anything that can destroy my yield.

16. Tenant-in-place assessment

Assess whether buying a South African rental property with an existing tenant in place is attractive in this case. Details: [DETAILS]. Evaluate payment reliability, rent vs market, lease strength, deposit handling, inspection condition, eviction risk if needed, and the likely hassle factor after transfer.

17. Negotiation strategy

Build a negotiation plan for this South African property deal. Asking price: [ASKING_PRICE]. My ideal price: [IDEAL_PRICE]. Max price: [MAX_PRICE]. Known weaknesses: [WEAKNESSES]. Give me a first offer, fallback positions, leverage points, and when to walk away.

18. Renovation scope filter

Help me separate cosmetic upgrades from dangerous money pits on this South African property. Known issues: [ISSUES]. Classify each item as cosmetic, necessary before tenanting, compliance/safety, or walk-away risk. Then rank them by urgency and expected return.

SECTION 4

Tenant Operations

19. Tenant screening rubric

Create a tenant-screening rubric for a South African landlord. I want a scorecard that covers affordability, employment stability, references, payment behaviour, household composition, risk signals, and what would trigger an automatic decline.

20. WhatsApp response to a rental enquiry

Draft a warm but efficient WhatsApp reply to a prospective tenant asking about this property: [DETAILS]. Ask for the right screening information without sounding hostile or desperate. Keep it concise and professional.

21. Viewing-day checklist

Build a landlord viewing-day checklist for a South African rental property. Include presentation, safety, documents to carry, questions to ask prospects, and what to note immediately after each viewing so I can compare applicants properly.

22. Lease-summary explainer

Draft a plain-English lease summary I can send to a prospective tenant before signing. It should explain rent, deposit, due date, utilities, maintenance responsibilities, notice rules, inspection process, and house rules clearly and professionally.

23. Rent arrears first message

Write a firm but calm first arrears message for a South African tenant who has missed rent. Rent due date was [DATE]. Amount outstanding is [AMOUNT]. I want the tone to be respectful, clear, and legally careful without sounding weak.

24. Payment arrangement template

Draft a payment-arrangement proposal message for a tenant in South Africa who is behind by [AMOUNT]. Include the acknowledgement of arrears, the exact proposed repayment structure, consequences of default, and a polite request for written confirmation.

SECTION 5

Maintenance and Property Management

25. Maintenance triage

Act as a pragmatic rental property operator in South Africa. Triage these maintenance issues: [ISSUES]. Sort them into emergency, urgent, can wait, and cosmetic. Explain what should be handled immediately, what can be bundled, and what I should ask a contractor before approving spend.

26. Contractor quote comparison

Compare these contractor quotes for a South African rental property repair: [QUOTE_A], [QUOTE_B], [QUOTE_C]. Evaluate completeness, hidden omissions, pricing logic, warranty risk, and which contractor looks safest rather than just cheapest.

27. Annual maintenance reserve planner

Build an annual maintenance reserve plan for this rental property in South Africa. Property type: [TYPE]. Age: [AGE]. Known issues: [KNOWN_ISSUES]. I want a practical reserve estimate, likely problem categories, and a suggested monthly reserve amount.

28. Tenant maintenance-response message

Draft a tenant update message about a maintenance issue at my South African rental property. Issue: [ISSUE]. Current status: [STATUS]. Expected next step: [NEXT_STEP]. Make it clear, reassuring, and specific so the tenant does not feel ignored.

29. Scope of work draft

Turn this messy repair brief into a clean contractor scope of work for a South African rental property: [BRIEF]. I want deliverables, exclusions, materials assumptions, start and end expectations, and what evidence of completion I should request.

30. Handover inspection list

Create a move-in or move-out inspection checklist for a South African rental property. Group items by room, utilities, keys/security, appliances, and damage capture. I want it in a format that can be used during an in-person inspection.

SECTION 6

Portfolio and Exit Decisions

31. Keep, sell, or refinance

Help me decide whether to keep, sell, or refinance this South African rental property. Property details: [DETAILS]. Current loan balance: [BALANCE]. Current rent: [RENT]. Condition: [CONDITION]. Alternative use of capital: [ALTERNATIVE]. Compare the three paths and recommend one.

32. Portfolio weak-link review

Review this rental portfolio like a ruthless operator, not a sentimental owner: [PORTFOLIO_DETAILS]. Identify the weakest property, the strongest property, where hidden concentration risk sits, and what I should fix, sell, or double down on.

33. Expansion readiness check

Am I actually ready to buy the next South African investment property? Current portfolio and finances: [DETAILS]. Assess cash reserves, management capacity, debt stress, concentration risk, and whether buying again now is disciplined or stupid.

34. Exit price target

Help me set a realistic exit price strategy for this South African property. Purchase price was [PURCHASE_PRICE]. Current estimated value is [VALUE]. Rent and condition context: [DETAILS]. I want a base-case, optimistic, and fast-sale pricing view, plus what prep work would improve the outcome.

35. Investor update message

Draft a monthly update I can send to a co-investor or partner on a South African property project. Include occupancy, rent collected, maintenance work, current risks, cash position, and next actions. Keep it crisp and professional.

36. Weekly operator review

Act as my property operations reviewer. Based on this week's events across my South African rentals [DETAILS], tell me: 1) what needs attention now, 2) what is drifting, 3) what admin should be automated or templated, and 4) the single highest-leverage action for next week.

Final note: the value here is not just the prompts. It is the speed and clarity they create when you are evaluating deals, speaking to tenants, handling contractors, or deciding whether a property is actually worth the headache.

The SA Property Investor AI Pack

Prepared as a digital handbook for South African rental investors. Use the prompts, edit the inputs, save the outputs that work, and build your own operator library from there.
